

PC FARM

AQUACULTURE EXPERT

33
YEARS

PC Farm produces different kinds of quality fish
to meet all its customer needs, in all seasons and areas.

**Let our experienced staff provide you
with excellent service.**

We are experts in aquaculture

Founded in 1983 we are committed to develop the production system in every aspect from broodstock, hatchery, to transportation and service.

Nowadays, PC Farm is a top ranking farm serving quality products to fisheries in Thailand and also neighbouring countries.

We really appreciate your patronage and pledge to develop our company so we can continue to provide you the best quality product on the market.

A good start begins with good strain.

Strain development play an important role in producing high quality fish. Our farm regularly checks and compares the strains to assure that our customers get the best strain.

Tracking device

We use the latest technology to track targeted fish in the water so that we can collect information on their growth rate.

Microchip

RFID technology is used for wireless connection. Each rice-sized microchip contains a 15 digit code that used to differentiate each fish.

Microchip tagging

After the fish are checked physically under anesthesia, We take a microchip in small needle and inject it into back of each fish. We verify correct placement by rechecking the code.

Proven Result

An optimum growth rate is our main objective. We are collecting data continuously to develop strains that will be most effective in the field. Our strain showed that it is effective in both technically and practically.

Broodstock

Selection system

Each broodstock are chosen carefully at the right time to produce high quality fry.

Our farm is dedicated to develop new strains, better management, and novel devices to produce quality broodstock and fry.

Each PC Farm's broodstock are selected statistically. Before changing broodstock each year, the new stock must be compared to ensure improvement in the following aspects: growth rate, structure, strength, and color.

Broodstock are vaccinized to prevent unwanted disease and improve their immune system. If by chance some of broodstock don't meet the target standard, it will be replaced immediately.

Broodstock habitats are examined and cared for regularly to ensure the best production rate.

**Good fry, start from
Quality broodstock**

From selected broodstock to standardized hatchery.

PC Farm developed a unique hatchery system and management.

The hatchery : Since fish live in water, the quality of the water is essential to fish health. Here, our experts check water quality routinely. Eggs and upspring fish are deposited in prepared nests. A closed water system is used to prevent contamination.

Our special nursery ponds are designed to facilitate inspection of fish. With this system, we can monitor them continuously and prevent disease outbreaks. Any fish that fails to meet the standard requirements are eliminated and not sold. The fry that we sell are selected carefully.

4 Production lines

Our Products : To meet our diverse customer needs. We produce four production lines.

Let our experts help you to select a product that's right for you.

Determining your needs : We can help you to select fish that will be an ideal fit to different environments including pond, tanks, or for growing out.

Timing : Our staff understand your desire to sell the best possible price and will help you to select a line that is suitable for each season.

01 **Small size**

This size is our most economical, and is a great deal.

02 **Medium size**

Our most popular line.

03 **Large size**

Rapid growing ideal for replacing old stock.

04 **Special selected fish S1, SR1, GB**

Optimal growth and superior strength.

Small size P8, #7, #6 and #5

They are suitable for the customer who needs a large amount of fish or has a large facility to grow fish.

size 0.12 - 0.50 g/piece

Medium size #4, #3, #2 and #1

This is a popular product line because its size makes it both easy to transport and to grow out. It is suitable for the general customer who will grow the fish in a pond or cage.

size 1 - 5 g/piece

Large size

150, 100, 80, 60, 50, 40, 30 and 20 piece/kg.

This fish is suitable for customer who needs to raise fish in a shorter amount of time.

size 6.66 - 50 g/piece

Special selection S1, SR1, GB

150, 100, 80, 60, 50, 40, 30 and 20 piece/kg.

This produce line is more complicated than other product lines and has to be manually selected for the highest quality in growth rate, strength and ideal body structure. (size 6.66 - 50 g/piece)

S1 is special selected tilapia fingerling

SR1 is special selected red tilapia fingerling

Investigative section

We are dedicated in every process of production.

For quality control purpose, we routinely check our process. Because so many variables, like weather can change each day, we stay on top of the situation which the latest technology to monitor fish health and their environment.

The investigate system is separated into several sections which work together to double check their work and detect any flaws in the system.

Broodstock : Broodstock are inspected routinely to ensure that eggs and fry are meeting the standard.

Hatchery : Strain, environment, equipment and hygiene are inspected continuously.

Sales : Before selling the fish they will be examined by a qualified staff member.

After sale : A sample of fish are kept for 7 days after the sale for evaluation.

Packing & transport

At the sales department, the fry are deposited and evaluated one last time before packing.

The resting pond

Fish that are ready to sell will be transported near our packing and transport area to prepare them to be sold.

Grading

Grading machines differentiate fish size without causing any injuries.

Transportation

Special trucks designed to maintain a stabilized temperature for fish travelling up to 1000 km. are used.

Community activities

On the farm : We have a good work place environment for our staff. When visiting us you will notice many trees which offer shade.

Educational activities : We can provide tours of our farm and share technical or general information to visitors depending on their needs.

Customer voice

Customer comments are greatly appreciated as they help us to improve and serve you better.
